

1) The angles on a straight line add up to..... 180°	2) 	3) 	4) 
5) 	6) 	7) 	8) 
9) 	10) 	11) 	12) 
13) 	14) 	15) 	16) 

Challenge 1

- The total of angle b and c are the same as angle a
- Angle a is 9° more than the size of the given angle.
- Angle b is 11° more than angle c

What is the value each angle?

$a = 63^\circ$ $b = 37^\circ$ $c = 26^\circ$

Create your own straight line puzzle like this one.

Challenge 2

Here are two angles.

Use the clues to calculate what the missing angles could be worth.

Angle x is larger than 130°

Angle y is a prime number between 40 and 50

There are 3 possible solutions

$x = 139^\circ$ $y = 41^\circ$

$x = 137^\circ$ $y = 43^\circ$

$x = 133^\circ$ $y = 47^\circ$
