

Year 1 and 2

John Boyd Dunlop

John Dunlop was a scientist who was born in Scotland. He changed the world with his invention, tyres with air inside of them. His son had a tricycle with metal wheels. It was harder to ride with metal wheels! John Dunlop put air inside two rubber sheets and filled it with air using a football pump. It was much easier to ride! Now, our cars and bikes have tyres filled with air so that we can have smooth journeys.
